

WORLDWIDE ACCESS PAY PER USE TELEPHONY SOLUTION

A reliable business telephony system is a must for business continuity and customer satisfaction. However, studies have shown that most telephony systems are flagged as overpriced, underutilized and complex to buy and operate. To overcome this issue, Intelogico worked with different partners to bring a pay per use fully scalable, fully redundant and secure basic VOIP telephony system.

The telephony system can also be used as an emergency failover system if a company's primary phone system fails.

BASIC TELEPHONY FEATURES

The solution provides basic telephony features like an IVR, ext. to ext. dialing, call holding, conferencing, follow me and voicemail-email.

ACCESS FROM ANYWHERE

Users, around the globe, with reliable internet connection, can connect using open source SIP devices (phone, softphone and mobile)

QUICK, SEAMLESS INSTALLATION

Except for physical phones (if needed), no equipment will be installed on premise. All it takes is a reliable internet connection and few minutes of installation.

US, CANADA AND TOLL FREE DIDS

US, Canadian and Toll-free numbers can be acquired and linked to the telephony system. Existing phone numbers can also be ported.
